ENTERED AT SAN FRANCISCO, CAL. AS SECOND-CLASS MATTER

THE NEW (2d) EDITION

Cabot's Differential Diagnosis

Dr. Cabot's book is like real medical practice: like your work in the office and in your home visits. Each patient comes to you complaining of some particular symptom—headache, backache, cough, etc. These are the first things you get to work from. Dr. Cabot calls them the *presenting symptoms*. He has written his book from this point of view. He so details diagnosis that each case brings before your mind's eye a selected group of reasonably probable causes. Then he narrows down the causes until the correct cause is found. No other book does this.

Octavo of 764 pages, illustrated. Presented through an analysis of 385 cases. By Richard C. Cabot, M. D., Assistant Professor of Clinical Medicine, Harvard Medical School.
Cloth, \$5.50 net; Half Morocco, \$7.00 net.

Davis' Operative Obstetrics A NEW WORK

Dr. Davis in this volume gives you all those new methods, all those operative procedures that you, any moment, may be called upon to use. And he gives them in such a clear, straightforward, definite way that you are able at once to grasp the meaning and follow the technic precisely. Included is a valuable section on the *Surgery of the Newborn*—a subject of the greatest importance to you. Altogether, this is an admirable work—one you may want *to-day*. Order it *now*.

Charles M. Green, M. D., Harvard Medical School

"Dr. Davis could not write a poor book, and this one is entirely worthy of him."

Octavo of 483 pages, with 264 illustrations. By Edward P. Davis, M. D., Professor of Obstetrics, Jefferson Medical College, Phila.
Cloth, \$5.50 net; Half Morocco, \$7.00 net.
